Geological Structures - A Practical
Introduction

John Waldron & Morgan Snyder

This text is disseminated via the Open Education Resource (OER) LibreTexts Project (<https://LibreTexts.org>) and like the thousands of other texts available within this powerful platform, it is freely available for reading, printing, and "consuming."

The LibreTexts mission is to bring together students, faculty, and scholars in a collaborative effort to provide an accessible, and comprehensive platform that empowers our community to develop, curate, adapt, and adopt openly licensed resources and technologies; through these efforts we can reduce the financial burden born from traditional educational resource costs, ensuring education is more accessible for students and communities worldwide.

Most, but not all, pages in the library have licenses that may allow individuals to make changes, save, and print this book. Carefully consult the applicable license(s) before pursuing such effects. Instructors can adopt existing LibreTexts texts or Remix them to quickly build course-specific resources to meet the needs of their students. Unlike traditional textbooks, LibreTexts' web based origins allow powerful integration of advanced features and new technologies to support learning.

LibreTexts is the adaptable, user-friendly non-profit open education resource platform that educators trust for creating, customizing, and sharing accessible, interactive textbooks, adaptive homework, and ancillary materials. We collaborate with individuals and organizations to champion open education initiatives, support institutional publishing programs, drive curriculum development projects, and more.

The LibreTexts libraries are Powered by [NICE CXone Expert](#) and was supported by the Department of Education Open Textbook Pilot Project, the California Education Learning Lab, the UC Davis Office of the Provost, the UC Davis Library, the California State University Affordable Learning Solutions Program, and Merlot. This material is based upon work supported by the National Science Foundation under Grant No. 1246120, 1525057, and 1413739.

Any opinions, findings, and conclusions or recommendations expressed in this material are those of the author(s) and do not necessarily reflect the views of the National Science Foundation nor the US Department of Education.

Have questions or comments? For information about adoptions or adaptations contact info@LibreTexts.org or visit our main website at <https://LibreTexts.org>.

The LibreTexts name, logo, and book covers are trademarked by LibreTexts, Inc. (a 501(c)(3) not-for-profit organization) and protected against unauthorized use.

Introduction

Resources for on-line learning

Geology tools

- [Powerpoint file containing tools for working on-screen](#)
- Introductory video on using the tools in Powerpoint

Making a geological field map using Powerpoint

- [Powerpoint template file containing basemap and legend](#)
- Video on making a geological field map using Powerpoint

- One more thing...

Videos on spherical projection on-screen

- Setting up the Wulff net for stereographic projections

- Plotting a line

- Angle between two lines

- Calculations with lines

- Plotting planes

- Intersection of two planes

- Perpendicular plane

- Angle between two planes

- Plotting a line by rake

- "Pi" construction for folds

- Small circles

About this Book

1: Topics

- 1.1: Geological Structures
- 1.2: Orientation of Structures
- 1.3: Primary Structures
- 1.4: Stereographic Projection
- 1.5: Folds
- 1.6: Boudinage
- 1.7: Kinematic Analysis and Strain
- 1.8: Fabrics
- 1.9: Dynamic Analysis- Stress
- 1.10: Fractures
- 1.11: Faults
- 1.12: Tectonic Environments of Faulting
- 1.13: Shear Zones
- 1.14: Extraterrestrial Impact Structures

2: Labs

- 2.1: Lab 1 - Orientation of Lines and Planes
- 2.2: Lab 2 - Cross-sections and Three-point Problems
- 2.3: Lab 3 - Working with Stereographic Projections
- 2.4: Lab 4 - Introduction to Folds
- 2.5: Lab 5 - More about Folds
- 2.6: Lab 6 - Fabrics and Folds
- 2.7: Lab 7 - Fractures
- 2.8: Lab 8 - Measuring Fault Slip
- 2.9: Lab 9 - Field Mapping
- 2.10: Lab 10 - Fold and Thrust Belts

This manual incorporates exercises and contributions from previous instructors of the course EAS 233 Geologic Structures at the University of Alberta, including Henry Charlesworth, Larry Heaman, Fred Clark, Shawna White, and others. It has also benefited from the proof-reading assistance of Marilyn Huff and from input from several generations of teaching assistants. These contributions are gratefully acknowledged.

The Open Educational Resource version of this manual benefitted from an Open Educational Resources grant from the University of Alberta, and the helpful advice and assistance of Krysta McNutt, Michelle Brailey and Jemma Forgie.
